Hype Cycle of Emerging AI Technologies

LACCEI 2025 - Country positioning by expert survey

Generated on May 11, 2026

```
                          Technologies analysed:  25
Countries included:     6  (Colombia, Costa Rica, Ecuador, Honduras, Mexico, Peru)
                     Country-technology cells:  150
               Global modal phase:     Slope of Enlightenment
```

Technology Index

1. AI Agentic workflow systems
2. AI audit and monitoring tools
3. AI ethics and compliance platforms
4. AI model marketplaces
5. AI security and privacy solutions
6. AI-powered business process management
7. Autonomous business operations
8. Code generation tools
9. Content creation platforms
10. Conversational AI agents
11. Decision automation systems
12. Federated learning systems
13. Human-AI collaboration interfaces
14. Intelligent virtual assistants
15. Large Language Models (LLMs)
16. Model bias detection and mitigation
17. Model lifecycle management
18. Model performance optimization
19. Multi-model orchestration
20. Multimodal AI systems
21. Process mining with AI
22. Responsible AI frameworks
23. Robotic Process Automation (RPA) with AI
24. Text-to-image generation
25. Workflow optimization platforms

Dominant phase = the phase most voted by experts in each country (minimum 3 valid responses per cell).
Marker size is proportional to the number of valid responses; color identifies the country.

Methodology

How survey responses map onto the Gartner Hype Cycle

The survey asked experts in each country to estimate the time-to-adoption of every technology, choosing one of five buckets. Those buckets are not Hype Cycle phases by themselves; we translate them following Gartner's convention that a longer time-to-adoption corresponds to an earlier phase of the cycle, and shorter horizons to later phases. The dominant phase per country-technology cell is the most-voted bucket (minimum 3 responses).

Survey bucket	->	Hype Cycle phase
Adoption already achieved	->	**Plateau of Productivity**
Under 2 years	->	**Slope of Enlightenment**
Between 2 and 5 years	->	**Trough of Disillusionment**
Between 5 and 10 years	->	**Peak of Inflated Expectations**
More than 10 years	->	**Innovation Trigger**

Notes for the research team:

- DK/NR (Don't Know / No Reply) answers are excluded from every count.
- A country-technology cell needs at least 3 valid responses to be shown.
- The chart marker size is proportional to the response count for that cell.
- Country color is consistent across all pages (see Color Legend page).

Country Color Legend

The same color scheme is used across every chart in this document.

Peru

Colombia

Ecuador

Mexico

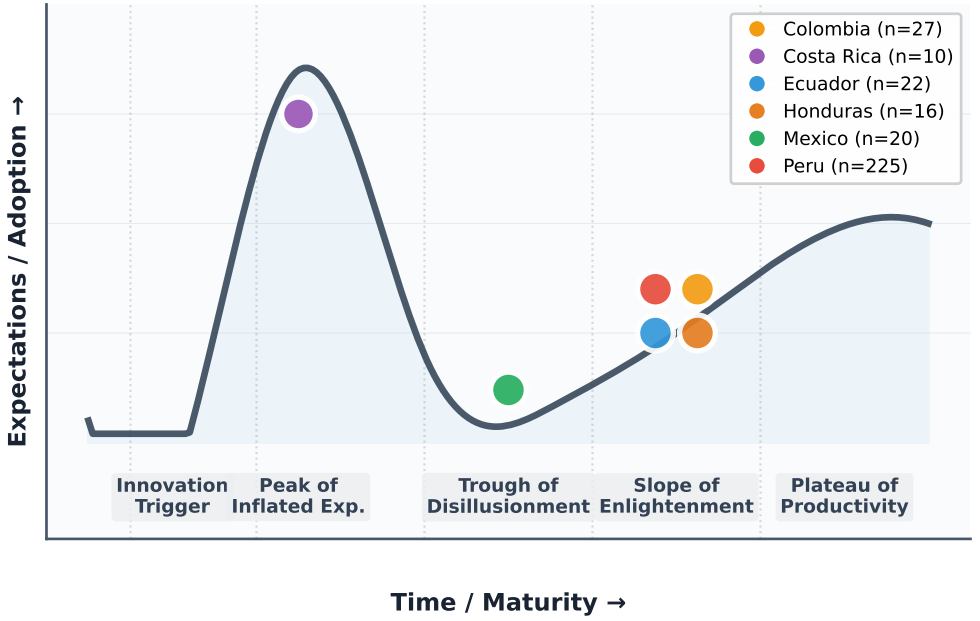

Costa Rica

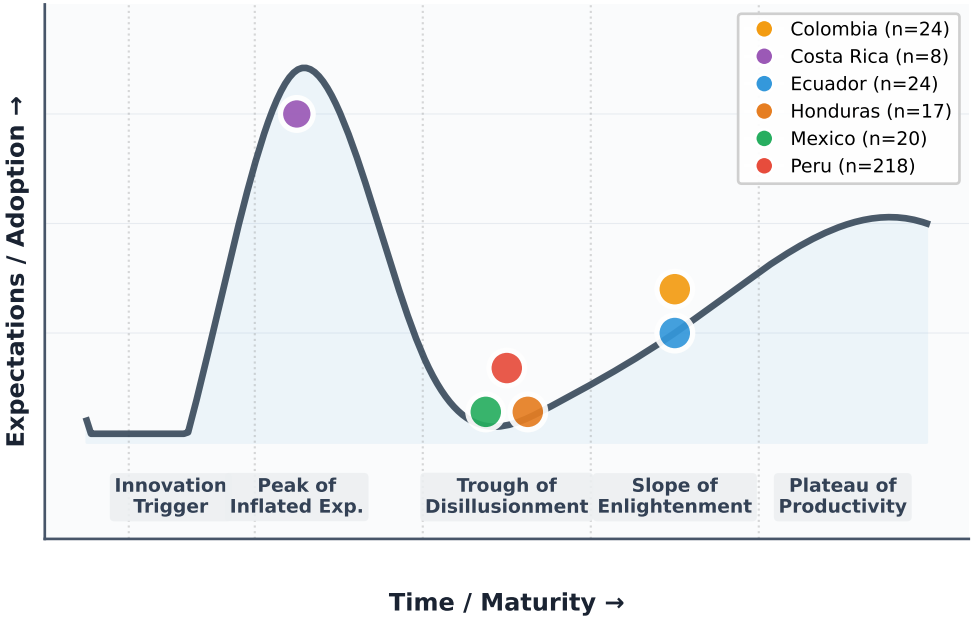

Honduras

Hype Cycle Positioning by Country - Emerging AI Technologies

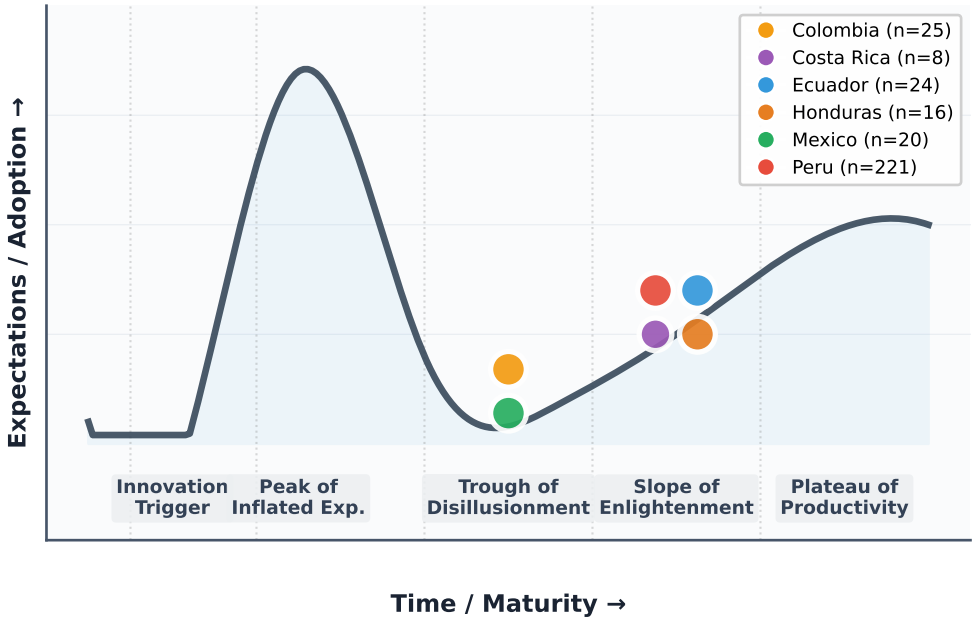

AI Agentic workflow systems

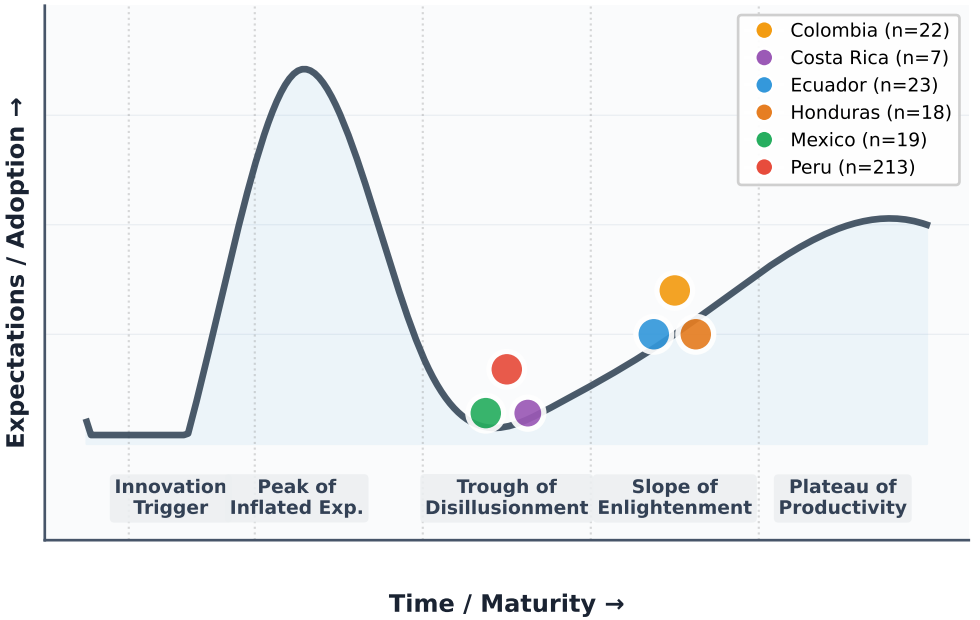

AI audit and monitoring tools

AI ethics and compliance platforms

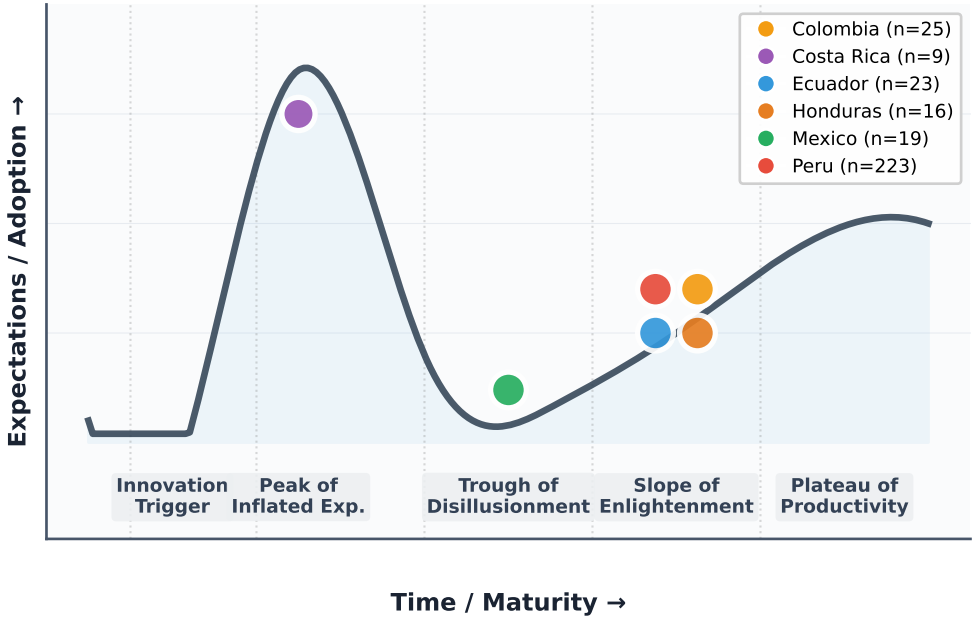

AI model marketplaces
